

Potential Policy Recommendations – running list ¹

In its own operations, including procurement and fleet policies and practices, state government should take effective measures to (a) conserve energy and (b) utilize clean, renewable sources of energy.

Continued support for scientific research on climate change processes and the human dimension of that change.

GHG inventories for UT state government operations and entire state, and program to monitor progress in reducing emissions

GHG Registry for Utah

- Discussion points – voluntary? Coordinate with other states

Potential collaboration with emerging regional cap and trade program

¹ Some of the comments received were framed as potential policy recommendations. Council members are encouraged to add to this running list of potential policy recommendations throughout the process.
